A Peculiar Locomotive ninety miles an hour that has just been completed in Patterson, New Jersey.

wheel, which in turn rests upon the ments, and, above all, the shifting panotrack. This lower wheel has two rims, rama of unfamiliar human faces, comone a foot smaller than the other. The outer rim touches the track and the inner or smaller rim supports the driv-ing-wheel. The motion of the drivingwheel thus communicated is magnified by this arrangement, in that the lower wheel turns one third faster than the driving-wheel, and so the speed is in-

The smaller rim of the lower wheel bears to the larger rim a relation similar to that of a very large hub to any wheel. Of course, any rate of motion communicated to such a hub is greatly magnified at the periphery the wheel. In the same way the motion of the drivingin this case is magnified by the peculiar arrangement of the wheel it rests upon. The inventor believes that this locomotive, if it were not for the run at the rate of 107 miles an hour.

He expects it to make ninety miles an hour easily.
